Rachael continues her Honors Research this semester. She is working with the Institutional Advancement Department at Westminster in the area of datamining. This semester is the second of three semesters. By the end of the semester she will have:

- understood the variables of the data set (including redundant and empty)
- created protocol for creating and testing models using the variables of the data set
- created at least one model to determine clustering of the cases
- determined how to analyze the validity of that model

Assessment will be finalized and a permanent grade given in Spring 2018 when she completes the thesis.
