Configuring wireless access outside Westminster.

If you have installed the college wireless network software and wish to configure wireless access outside the college you must do the following.

Click start, all programs, funk software, Odyssey Client, Odyssey Client Manager.

Another box will come up, select scan.
This section will have a listing of all the available wireless access points in range of you. Select the appropriate one that will come up for you and click OK.
If the wireless network is secure the following box below comes up. From here you can configure any passwords or passcodes the wireless network you are trying to connect to has setup on it. If the wireless network is unsecure the box below doesn’t come up and will automatically connect you to the network. Please note that this is for off campus wireless activity only.
